

X-Border

TETRA Network Group Call Repeater

Designed for international border areas where users on different TETRA networks need to talk to each other. Compact self-contained repeater unit allows any calls on one radio terminal to be repeated on a different radio terminal.

X-Border is a quick and simple solution that can be set up anywhere and allows users continue to use their normal TETRA terminals without any complex roaming configuration or the need for wired connections into either network.

Key features

- ▶ all calls received on radio terminal 'A' on network 'A' are re-transmitted on radio terminal 'B' on network 'B' and vice versa, so that users on network 'A' can communicate easily with users on network 'B'
- ▶ intended to be installed near the border where there is overlapping coverage from both TETRA networks
- ▶ built-in loudspeakers for monitoring call activity
- ▶ Matched audio connection ensures good voice quality
- ▶ case can be locked shut with padlock. Built-in fan ensures radio terminals are kept cool
- ▶ compatible with Motorola, Sepura & Teltronic TETRA radio terminals
- ▶ suitable antennas should be attached to the antenna ports
- ▶ case dimensions: 361 x 289 x 165mm, 12V DC power
